3 Our Project Explained

4 Superposition

5 Entanglement

6 The Simulation's Steps

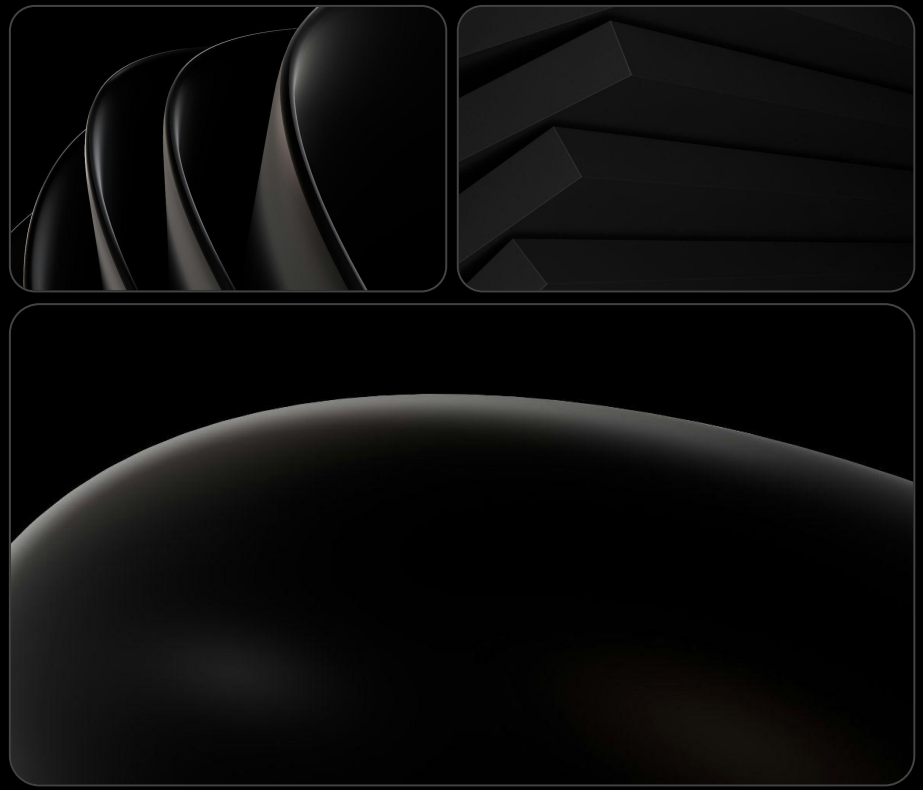
7 Qubit Demonstration

8 Algorithm

9 Real-World Connection

Our mission

Quantum Neural Firing Model



Learn more

Superposition Modeled

1. Qubits can exist in multiple states at once
2. Created using the Hadamard (H) gate
3. Represents uncertainty in neuron firing

Entanglement

1. Entanglement links qubits

0001

2. Represents the correlated neurons

0000

3. Created using H + CNOT

Prediction

fhrhgnn

Outcome was jghuefhr

Simulation Circuit Steps

1

Add a value or belief

2

Add a value or belief

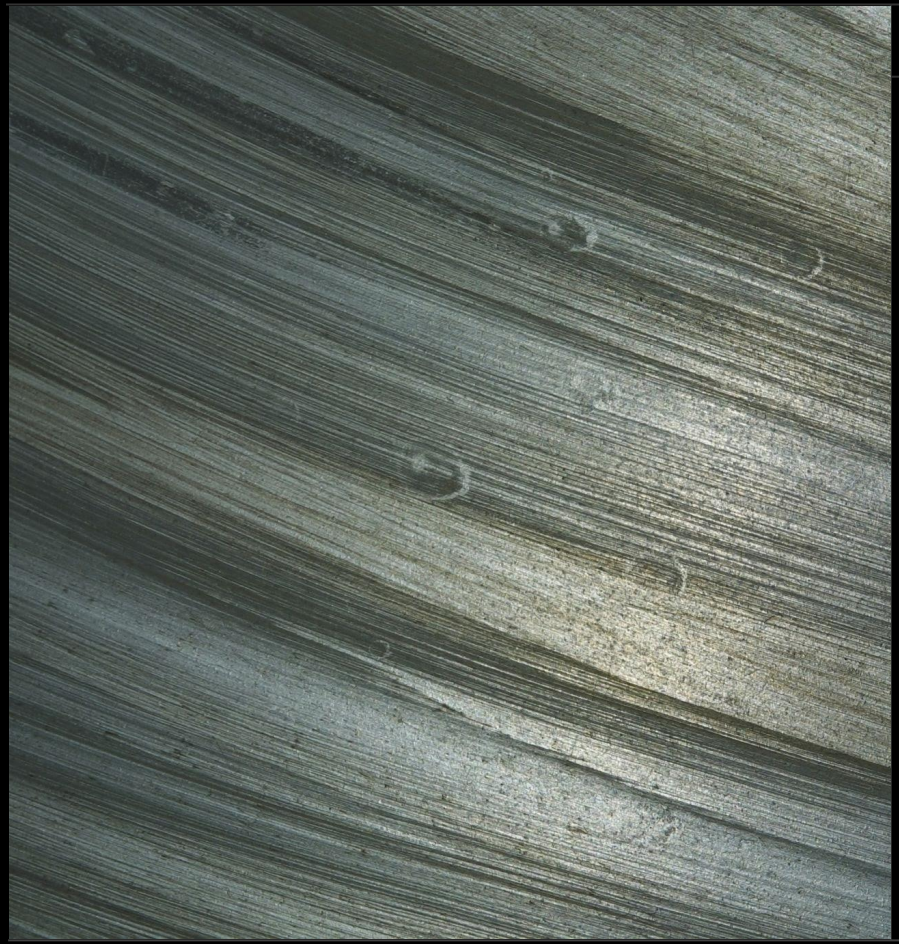
3

Add a value or belief

Qubit Demonstration

1. Multi-qubit circuit
2. Combines single + two-qubit gates
3. All qubits measured

Learn more



Algorithm Used

1. Grover's Algorithm
2. Amplifies correct outcome
3. Models decision selection

Real-World Connection & How it Solves Issues

1. Models neural firing probabilities
2. Captures randomness in brain activity
3. Helps understand decision-making
4. Improves statistical modeling
